1 installation

1.1 Installation requirements:

1. You need a Windows computer with Windows 10 or 11. Other operating systems such as Apple or Linux cannot be used.
2. The computer should not be older than 3 years, otherwise the working speed could be slow.
3. The screen resolution should be HD or better FullHD (the lower the resolution , the more you have to scroll to see everything).
4. The processor should be at least in the performance class of an "Intel i3", ideally i5 or i7.
5. The RAM should be 8 GB or ideally 16 GB.
6. The computer must be connected to a stable Internet connection (LAN cable or WLAN) during installation and activation. After that, the program will work without Internet. All data is only saved locally on your computer.

1.2 The Download (Downloading the Software)

To download the software, please click on the following link:

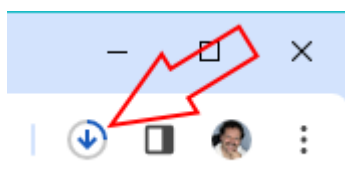

https://buchergmbh.de/public/bcs_setup.exe

(Alternatively, you can go to the Bucher GmbH website, www.buchergmbh.de and log in to "Customer Login". To do this, use the user name and password from the license data that was sent to you by Bucher GmbH. There you can then click on "Bucher Coaching Systems" in the "Downloads" section and download the latest version.)

If clicking on the link above does not open a browser window, please copy this link into your browser window (at the top of the URL address bar)

When Google Chrome opens, proceed as follows:

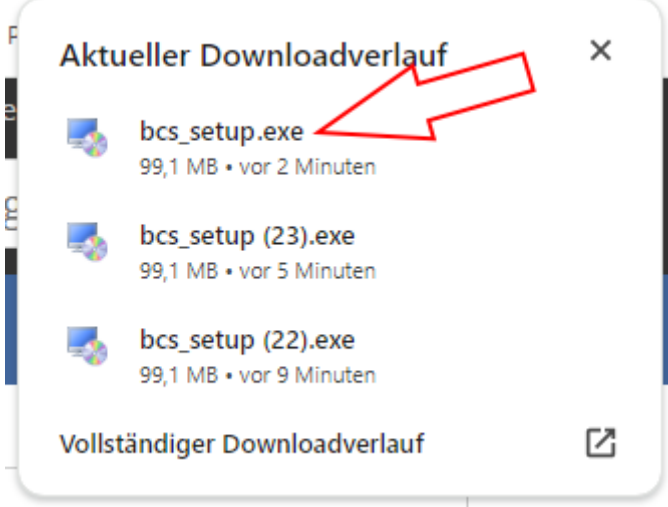

You will find a small symbol in the top right of the browser that indicates the download. When the blue circle is full, the download is complete. If you use Firefox as your browser, the procedure is the same as Google Chrome. The symbols are different, but they look similar. If you use Microsoft Edge as your browser, you have to complete one more step, which is described at the end of this text.

This icon will change after the download is complete and will look like this:

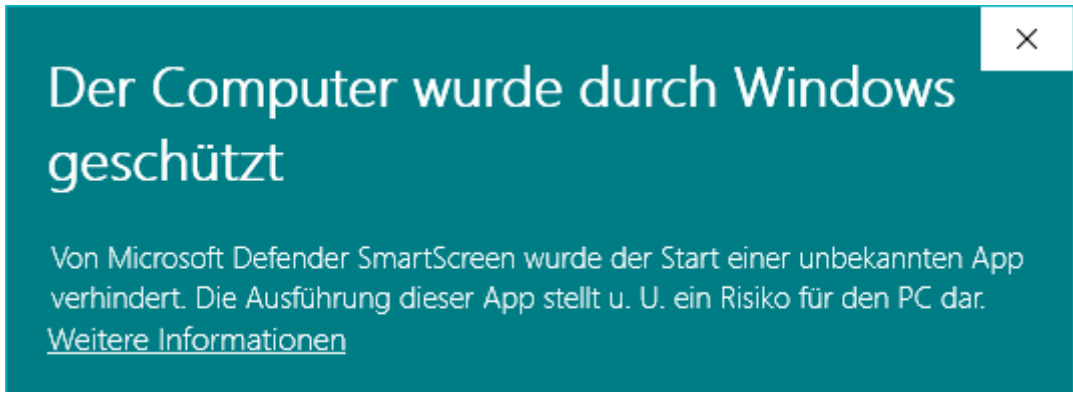

Click on this icon to display the downloads. The program's setup file should appear at the top:

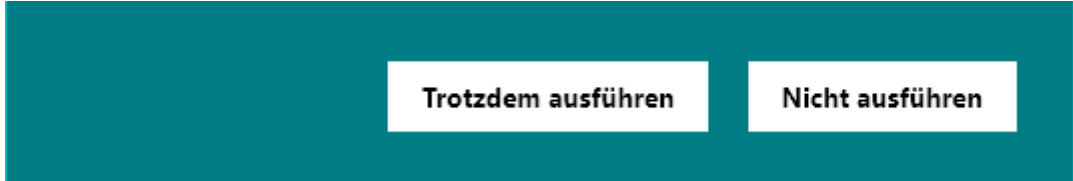

Click on this entry.

A warning message from Windows will appear, where you must click on "More information".

Then you have to click on "Run anyway":

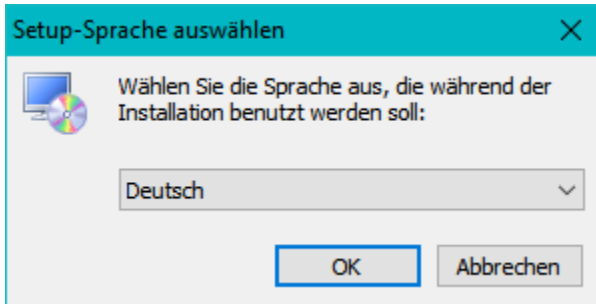

(This message always appears when a newly downloaded program is started.)

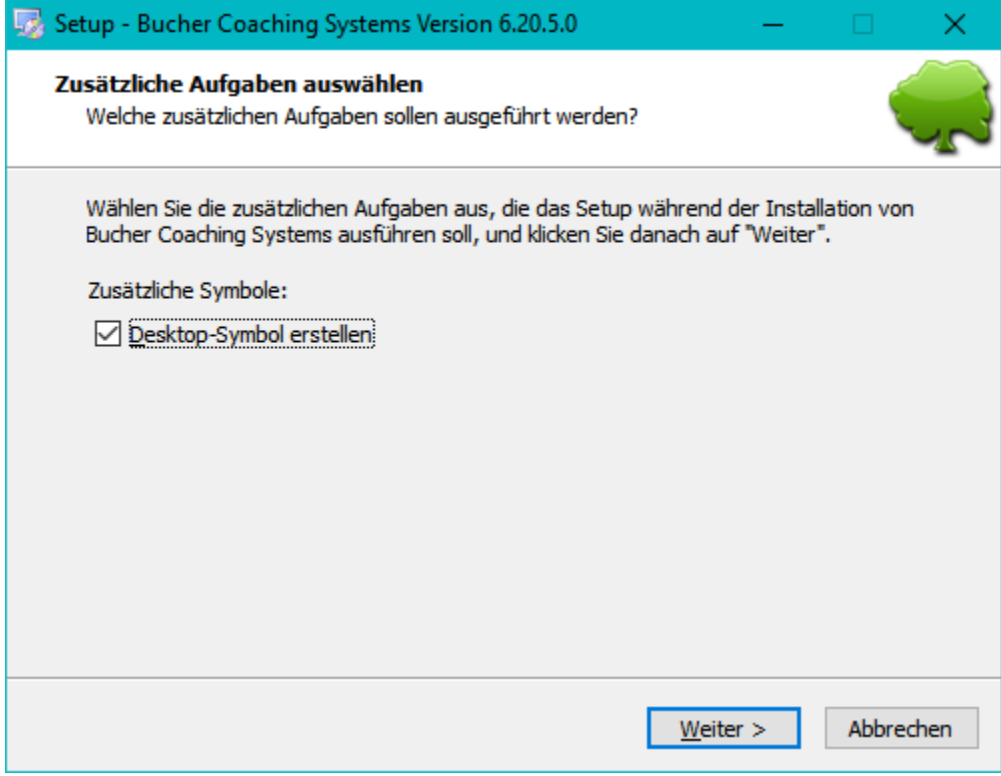

You will then see a warning message about installing the setup file. You must click "Yes" when asked: "Do you want to allow...".

1.3 The installation

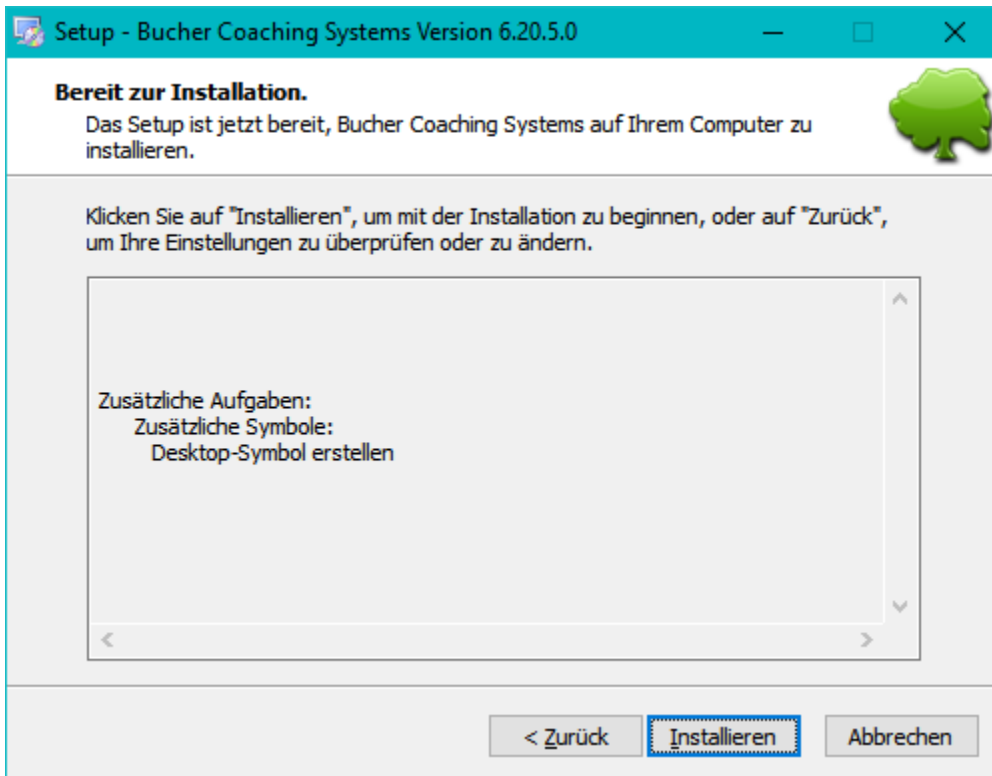

The setup program will now appear and ask for the installation language (this has nothing to do with the language that is set later in the program).

Confirm the language with "OK".
It takes a moment until the next window appears:

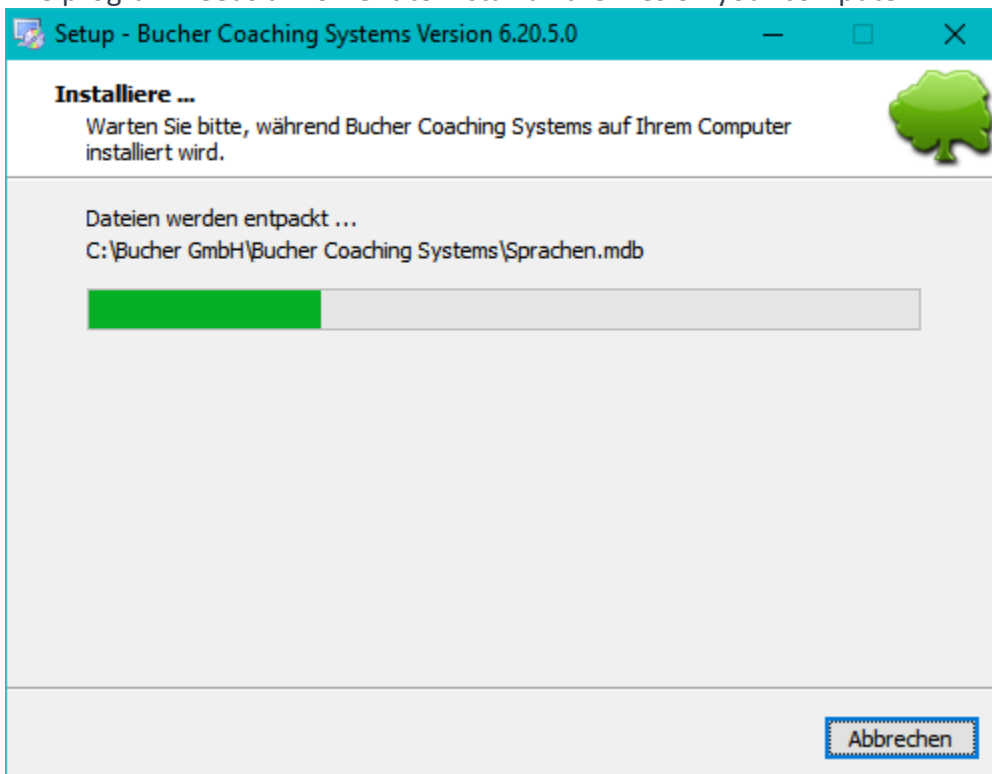

Click "Next" here and, if necessary, in the next windows until you reach the "Install" button.

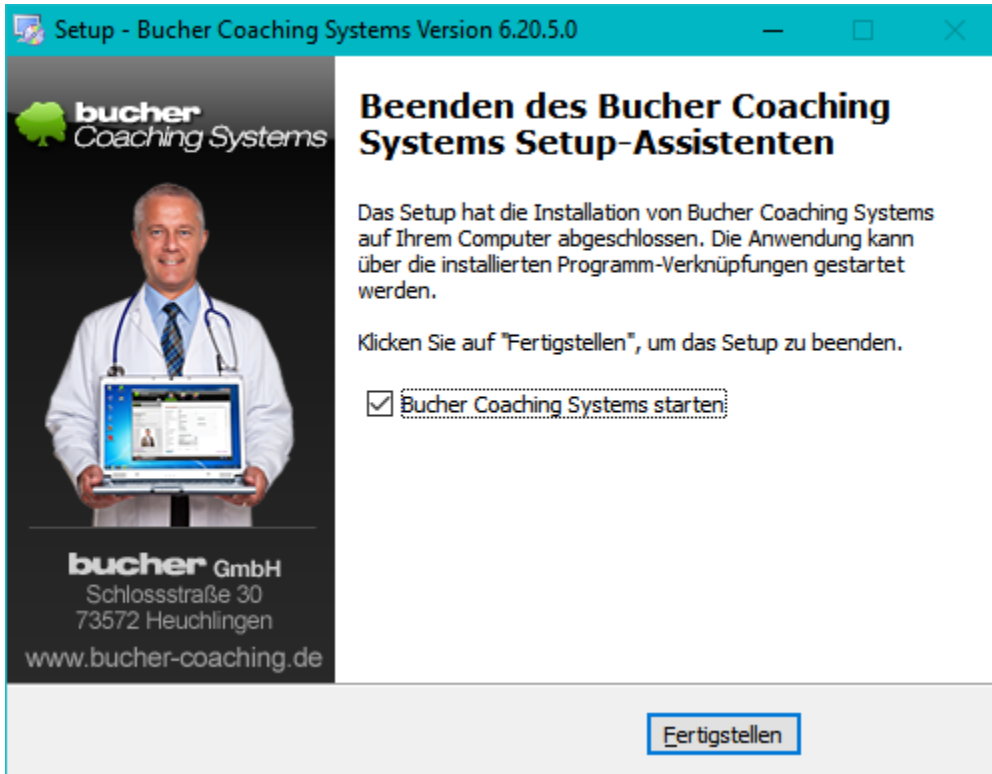

Now click on "Install".

The program needs a moment to install all the files on your computer:

When the installation is complete, the following screen appears:

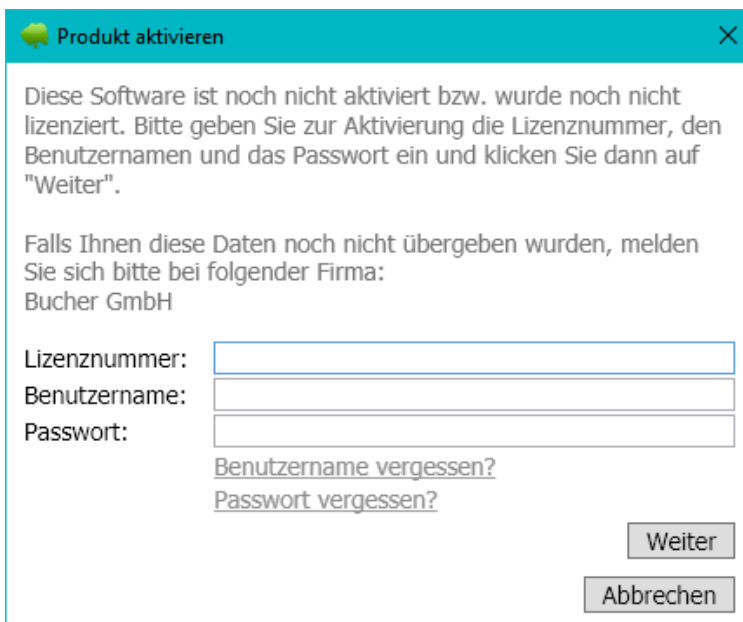

Click "Finish" to end the setup. The program will then start automatically unless you uncheck the box.

The program always starts with a self-test.

1.4 Activating the software

(Transferring the license to your computer)

When you start the program for the first time, the "Activate Product" window appears.

The following three numbers must be entered there:

- The **license number**
- The **user name** of the license
- The license **password**

After entering this data, click "Next".

The following window opens.

Please fill in all fields marked with a red asterisk. At least one telephone number is required (you will not normally receive calls from us, except in special emergencies).

After you have filled in all the required fields, you must click on "Activate Now". This the license activated . It appears following Report :

After clicking OK the program starts with all functions.

In the future, you can click the tree icon on your desktop to start the program.

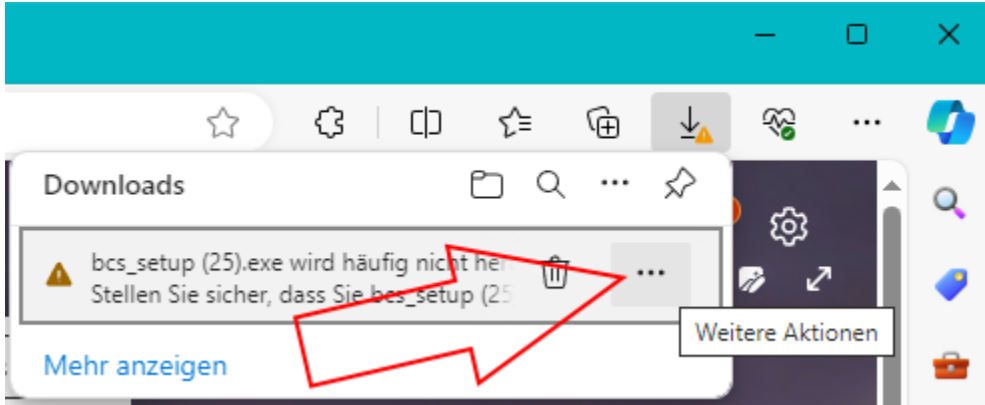

1.5 In case of problems

If the licensing does not work or a problem occurs, please contact Bucher GmbH at +49 7174 7400. The hotline hours are weekdays between 11 a.m. and 4 p.m.

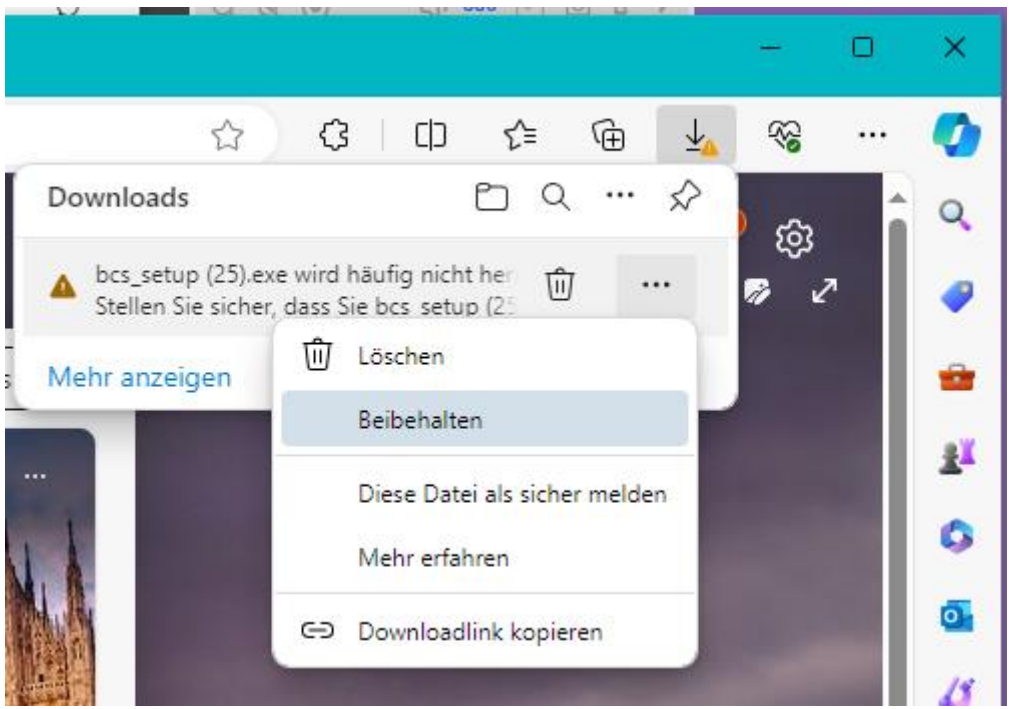

You can also write an email to wolfgang@buchergmbh.de

1.6 Special features when using the Microsoft Edge browser

Edge browser , you will need to complete an additional step during the download. Here, too, the file appears at the top right next to the download symbol.

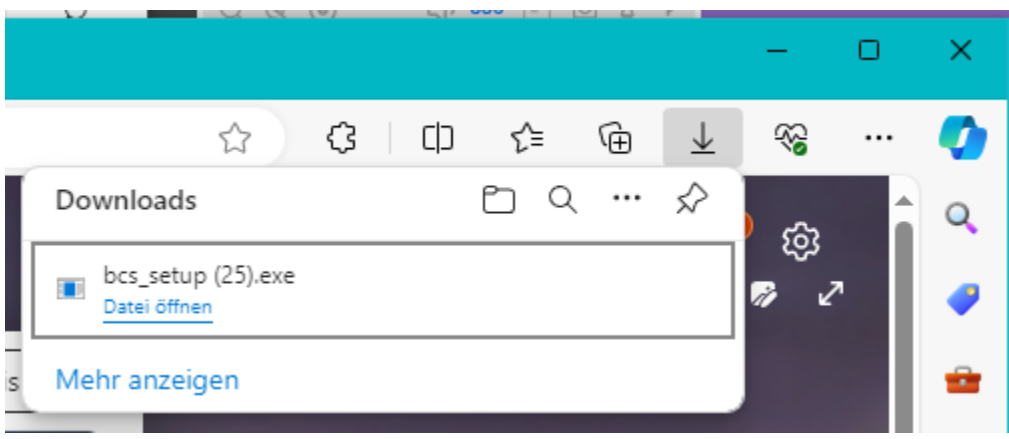

These only appear when you move the mouse to this point. Then click on these three points .

In the small context menu, click on "Keep". A small window will open. Click on "Show more". Then click on "Keep anyway". Only now will the bcs_setup.exe be completely downloaded and will be available to open after a while.

This looks like this:

Click on "Open file" there.
You can now continue with the installation as described above.
